

DOUBLEHEADER TOPS OFF 14 STRAIGHT

(By Associated Press.)
NEW YORK, Sept. 20.—The New York Nationals brought their winning streak to 14 straight victories by winning a doubleheader from Pittsburgh 9 to 2 and 5 to 1. New York had little trouble in hitting Pittsburgh's young pitchers, finding Jacobs, Scott and Evans for 21 hits in the two games. Kauff made a home run in each game, giving him three for the series.

(By Associated Press.)
BOSTON, Sept. 20.—Boston defeated St. Louis 6 to 3 in the final game of the series here by hard hitting. Egan led the attack with two doubles and a triple in four times at bat, while Maranville made a home run with two men on bases.

(By Associated Press.)
PHILADELPHIA, Sept. 20.—Stolen bases and errors with some hits were the combination which gave Chicago a victory over Philadelphia, 2 to 0. In the second inning Sailer, who singled, was forced by Williams, who stole second base and scored on Cravath's miff of Yerkes' fly. In the eighth Jacobson singled, stole second and went to third on Killifer's wild throw and scored on Sailer's second single.

(By Associated Press.)
BROOKLYN, Sept. 20.—Cincinnati made hits off Pfeffer in every inning except the seventh, but by reckless base running lost the chances to score, Brooklyn making it three out of four in the series by winning 3 to 1. Myers threw out four runners who tried to steal second. In the sixth, with Merkle on first, Wheat drove the ball over the right field wall for a homer, sewing up the game.

(By Associated Press.)
CHICAGO, Sept. 20.—A corps of pinch hitters, mustered into the game in the ninth by Manager Rowland,

enabled the Chicago Americans to pull out a 5 to 4 victory over Philadelphia in the first game of the series, and kept pace with the leaders. The victory leaves Chicago one and one-half games behind the world's champions and half a game behind Detroit. Philadelphia hit Benz hard and took a commanding lead before Danforth was rushed to the mound. During this period the locals bunched hits off Nabors and scored two runs.

(By Associated Press.)
DETROIT, Sept. 20.—Boston won from Detroit, 3 to 1, in the first game of the series. Detroit was unable to hit Mays when men were waiting to score. Boston, usually effective pitching to Boston, walked five men, three in the first inning.

(By Associated Press.)
CLEVELAND, Sept. 20.—Poor pitching gave Washington the victory over Cleveland, 9 to 6. Bagby was ineffective in the first, while ragged work by Morton and Beebe in the seventh added six runs to the visitors' score. Gallia was very effective except in the fifth and ninth innings. He struck out eight batters.

(By Associated Press.)
ST. LOUIS, Sept. 20.—A wild throw by Austin in the fifteenth allowed Magee to score from second with the run that gave New York a 4 to 3 victory over St. Louis here. Peckinpaugh's three base hit and Davenport's wild pitch gave New York a run in the sixth. In the seventh a triple by Gedeon and Walter's sacrifice netted another, while in the ninth Baker knocked a home run. Up to the ninth Cullop had given but two hits, but in this inning the locals got three singles and tied the score before he was relieved by Shawkey. In the fifteenth, after two were out, Magee doubled and Hendrix hit to Austin, whose low throw to first let Magee score.

APPEARANCE OF THE MIDWAY MINE SINCE THE RECENT STRIKE

A visit to the Midway may result in the correction of certain misapprehensions that have existed regarding that remarkable property. The vein is not less than 100 feet in width and has a due easterly and westerly trend. It is quartz throughout, but the values are too lean in the gangue formation to be termed ore. A crosscut was run southerly from the shaft at the 800 foot point and it cut the formation from the Montana breccia on the hanging to the West End rhyolite on the foot.

At a point approximately in the center of the ledge a drift was started westward and one eastward. The easterly drift is being advanced as rapidly as possible to connect with the workings from the old Midway shaft in order to provide the air that is so sadly needed in a property that has but one outlet to the surface. The connection will be made in three weeks or a month. Air is pumped from the surface through a ten inch pipe and the water Leyners keep the dust down. As soon, however, as the air connection is made, which is also a provision for "safety first," the superintendent will take steps to develop a number of ore bodies that were cut and passed in the linear workings.

A drift has been sent westwardly from the shaft, following nearly the center of the ledge. It has cut nearly a score of breaks, all of which trend northwesterly and southeasterly. It

is on these breaks that the ore is formed, in places a few inches and in others several feet in width. No attempt has been made to follow these ore bodies on their trend, which would lead them to the walls of the silica formation, probably sixty or seventy feet in either direction on the "bias." The intent has been to drift on westerly through the vast territory that remains to be explored and continue to cut the breaks until the air connection is made, after which angle drifts from the main drifts will be run and the ore will be extracted, raises being put up at favorable points and stoping undertaken wherever it may be justified.

The latest break to be encountered in the west drift is the best yet found in the new workings. The writer would estimate it worth from \$20 to \$500 a ton, with the general value near the former figure except for the enrichment received from the rich seams. The latter contain ruby in abundance, as well as staphanite, argenteite and polybasite, the latter being almost metallic. The gold values are in excellent proportion.

A rumor sent broadcast that the "vein" had pinched out to the westward was because the course of the drift was not changed, while the ore merely veered out to the northwest. A raise has been put up on it a short distance and the values are continuous.

The superintendent will continue to

run to the next break and meanwhile will forward to mill the ore that has been broken down, which will amount to about two carloads. It will prove of better than the average milling ore in the camp and could be sorted up to a very high grade, but the fines will all be preserved and this will serve to cut down the general average, although it will add to the total of the output.

By the time the air connection is made the mine will be opened up along the break lines, and there is every reason to believe the tonnage output will be steady.

The Midway does not rely entirely upon its showing on the eighth level. It has a crosscut well advanced on the eleventh level, but has suspended operations there in order to divert all the air to the workings on the 800. On the 1300 it encountered an excellent vein when it was driven out by water, but the Victor operations have dewatered this level and work will be resumed there in about a month. The ore bin was completed yesterday and the cars are being steadily dumped on the platform preparatory to shipping.

TEMPERATURE REPORT

Highest temperature yesterday, 78; lowest this morning, 60.
Highest temperature a year ago, 80; lowest, 58.

DON'T BUY ANCIENT BREAD SHIPPED IN

I would not buy strange, dry, squeezed bread, when I can buy bread of superior quality in every respect. The Progress and Vienna Bakery bread is rich in flavor and is made of the choicest eastern flour, and is heavier and goes further than any imported bread. We are always ready for any order for pastry of any kind equal to that made in any city. We can serve a large banquet as easy as a small banquet.

PRODUCTION OF WHITE CAPS PROMISES TO BE PEERLESS

So large are the bodies of ore opened thus far on the 310 level of the White Caps that it is prophesied by some who have closely followed the developments that it will prove to be one of the heaviest producers of southern Nevada during the next decade. Where the level above passed through narrow veins and low enrichment, there are now massive ledges with values of excellent milling grade, while several of the shoots of ore cannot be traced to any developments on the 200, but have their apices below that level. It is problematical what will be shown at depth, but there is every reason to believe that the showings to be made when the shaft is deepened and levels are run will be even better than on the 310, for the ore is indubitably a primary enrichment and will continue down to the alaskite, which is probably 1500 or 2000 feet from the collar of the shaft.

To one who visits the property once or twice a month, each latest view of the workings is a revelation. It is a mine that grows on one, expanding as the headings are advanced. Even with all the ore that has thus far been put in sight, the west body is yet to be tapped, and it proved the largest and richest on the 200. The shoots now in sight are what are known as the east, shaft and raise bodies, with others unnamed that are separated by horres of lime. Realgar has made its appearance in the most easterly working. This is a rare mineral, being a sulphide of arsenic. It carries gold, although not in the quantity shown in the black ore, but the realgar is really a cabinet specimen formation and is more, for if followed it may develop the gold bearing qualities that it does in the Consol. Mercur, where it runs five ounces in gold and is eagerly sought for.

Practically all the equipment for the reduction plant is now either on the ground or in transit, with the exception of the roaster, which is being manufactured in the east. The steel and fire brick to be used in its construction will weigh 130,000 pounds. The entire mill is expected to be complete and in full running order by February 1.

In the meantime experiments in treatment are being steadily continued. By a cost of about \$3.50 a ton the extraction can be easily brought up to 90 per cent, although a simpler and much less expensive treatment will yield a slightly less extraction.

Within about a month the work of deepening the shaft will begin. It will be made two compartments and manway below the 310 and later the additional compartment will be secured by raising from that level. A huge motor and ten drill, two stage compressor has been bought from the Pittsburgh Silver Peak and will be shipped immediately.
